About Trust Marmar

TRUST Marmar for Marble was established in 1998 as a natural extension of a successful custom building business, TRUST Marmar is manufacturer, major exporter and wholesale supplier of premium quality natural Egyptian marble for commercial and residential building projects.

TRUST Marmar quickly gained and has maintained a reputation for exporting and distributing only the highest quality of Egyptian marble, while providing clients with personalized, detailed attention in selecting the right material for their projects. Our staff prides themselves on professionalism and expertise in every aspect of our business, including project design, material specifications, material sourcing, methods of installation, transportation and delivery, and relationship building with our customers and clients.

It is our commitment to quality, service, and innovation that sets us apart from other marble manufacturers and distributors.

We offer customization, worldwide shipping and fast delivery

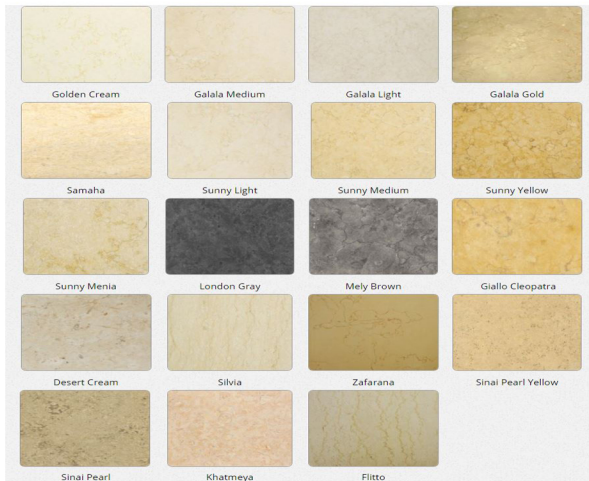

TRUST MARMAR
For Marble and Granite

Egyptian Marble

The Egyptian marble and granite were used historically in Egypt. During the Age of Ancient Egyptians, the granite was extracted from Upper Egypt and used in the construction of buildings as well as temples. In addition, other cultures learnt from the Egyptian methods of extracting 3rd century B.C. Moreover, when the Romans and cutting stones like the Ancient Romans in .took the knowhow of quarrying from Egypt, they transferred it to other places including Italy Italy acquired the knowhow from the Romans and concentrated on developing the industry. There are several kinds of natural stone in Egypt including marble, granite, alabaster, slate, crystalline limestone, and other ornamental stones. Most of the marble types in Egypt have the beige color and its light and dark shades. Egypt is known for the beige colored marble all over the world including: Galala, Rosa Cream, Sunny, Imperial Honey, and Silvia. The beige color is one of the most practical colors of marble globally for flooring and cladding indoors as well as outdoors. Over the centuries marble has become synonymous with tradition and culture, capturing the essence of old-world charm. The varied textured pattern of marble tile and slabs creates a subtle, yet rich feel. Marble surfaces have been adding this luxurious texture to architecture and interior design projects for years. Due to their beauty and durability, they are .considered to be a material of the highest suitability for a multitude of applications

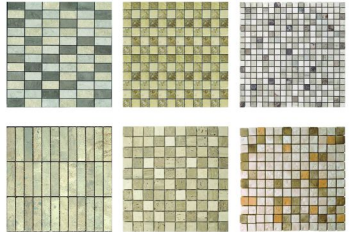

Egyptian Marble

Mosaic Tiles

Mosaic Tiles

Square Mosaic Tile has been a favorite of interior designers, architects, and home owners for centuries. Mosaics are durable, easy to clean, and ideal for a multitude of environments such as bathrooms and kitchens. The geometric square format creates visual interest without disrupting the linear flow of other design aspects in a space. Each Tile is individually cut and hand blended to achieve a masterful balance of tonality. Many stones in this series come in hard to find finishes for their size, color and material. We stock Polished, honed and tumbled finishes.

Marble Mosaic Borders

Marble Borders

Marble Borders

Marble borders and Tiles transform attractive interior walls and floors in to extraordinary features. Adding this very special finishing touch requires a small amount of effort but creates a major effect on the overall appearance once the project is completed. A Tile Border can dramatically improve the overall appearance of the kitchen and bath and that in turn can increase the resale value of your home.

Mosaic Art Work

Mosaic Art Work

Mosaic is the art of creating images with an assemblage of small pieces of colored stone. It is a technique of decorative art or interior decoration. Most mosaics are made of small, flat, roughly square, pieces of stone of different colors, known as tesserae; but some, especially floor mosaics, may also be made of small rounded pieces of stone, and called "pebble mosaics". Mosaic has a long history, starting in Mesopotamia in the 3rd millennium BC. Pebble mosaics were made in Tiryns in Mycenaean Greece; mosaics with patterns and pictures became widespread in classical times, both in Ancient Greece and Ancient Rome. Early Christian basilicas from the 4th century onwards were decorated with wall and ceiling mosaics. Mosaic was widely used on religious buildings and palaces in early Islamic art, including Islam's first great religious building, the Dome of the Rock in Jerusalem, and the Umayyad Mosque in Damascus.

Quarry

Trust Marmar Quarry

The Egyptian land is rich in natural stone resources which are available in various colors, types, and qualities. Marble, limestone, alabaster, slate, basalt, and granite are found in Egypt having diverse features and qualities. The marble and granite deposits are extracted from quarries which are located in various areas: the Red Sea coasts (38%), Suez (14%), Sinai (11%), Upper Egypt (9%), and the Nile Valley (2%).

The estimated number of quarries located all over Egypt is 500 quarries. The number of the quarries is almost geographically distributed as follows:

- 300 marble and marbleized limestone quarries in South Galala
- 100 granite quarries in Aswan and Red Sea
- 50 marble and granite quarries in Sinai
- 50 marble and marbleized limestone quarries in North Galala.

The quarries capacity is high in which they extract output which is equal to 5 million ton per year.

In Egypt, there is the True Marble which is found within the basement rocks. The True Marble is crystalline limestone that is characterized with diverse proportions of dolomite.

This kind of marble is available mainly in two places. The first place is Wadi Al Miyah which is located in the Eastern Desert between Edfu and Marsa Alam. In this place, True Marble has different color variation mainly white, black, or grey. The second place is Wadi Al Alaqi that is in southeast of Aswan.

Trust Marmar's main source of supply is its own quarries. This clearly distinguishes it from other companies and enables it to guarantee rapid supply of Natural Stone for large projects.

Trust Marmar owns two quarries of Galala marble which is extracted from a mountain called Galala located in Suez city, Egypt. It was named of the trade name of this mountain "Galala Marble". Its colors are creamy and creamy white as its variations differ according to the quarry stones.

Quarry Production Process

Stone quarrying is a multistage process by which rock is extracted from the ground and cut into the required sizes to be used commercially or in homes. At the Trust Marmar quarry engineers will profile the surface, then design the blasting process and plot the rock to be extracted.

After blasting, secondary cutting will be done subsequently using hydraulic diggers and other equipment. The cutting can go up to three or four stages.

The cut rocks are transported along the process line on conveyor belts or down chutes.

These are then sent to the factories for further processing into the desired slabs or tiles.

Because of our blocks derive from the best and most productive quarries in Egypt;

Trust Marmar ensures that each individual project will be completed with material sourced from the same quarry to ensure consistency in tonality.

Through our comprehensive supply management we have a regular flow of marble blocks in order to satisfy most new coming orders.
